Aviation Industry - an Insurable Risk?

Daniel Weinmann, Head GA & Aerospace EMEA, Swiss Re Corporate Solutions
Philip Chrystal, Senior Claims Expert, Swiss Re Corporate Solutions

Datum: Donnerstag, 16. März 2017

Zeit: 17.30 Uhr

Ort: ETH Zürich, Maschinenlabor Hörsaal ML H 44 (Maschinenlabor)

It has been frequently said that without insurance the aviation industry would be grounded. Generating approximately USD 4 Billion in annual premium and consuming a corresponding USD 3.3 Billion in annual losses on average, the global insurance market provides coverage from Drones and Ultralights through to Boeing Dreamliners and Airbus 380s.

This presentation will explore how the aviation insurance market works, describing the assessment, pricing and underwriting of the risk including the various types of coverage purchased by airlines and manufacturers. It will also explain what happens in the aftermath of an accident and the important role insurance plays in compensating passengers, their families and victims on the ground.

Insights into this fascinating financial industry will be provided by both underwriters and a claims expert from one of the world's largest aviation insurers and reinsurers, Swiss Re, based locally here in Zurich.

Wir freuen uns auf Ihre Teilnahme. Gäste sind herzlich willkommen.

Mit freundlichen Grüßen
Dr. Jürg Wildi, Präsident
